PROGRESS UPDATE | SPRINT 7.2 | JUNE 15 – 21

SPRINT 7: (4/5) * 100 = 80 %

Tasks Completed – 4/5 completed

PROJECT COMPLETION (30/31) * 100 = 96.77%

SPRINT 7

Dedicated to comprehensive system testing to ensure the application is stable, functional, and ready for deployment. all aimed at identifying bugs, validating module interactions, assessing performance, and confirming the system meets user expectations.

What went well: We implemented the Captcha to each form on our landing page to avoid the DDoS attack, and also on some of the pages, we managed to create the navigation bar in a hamburger, we implemented the composer on our contact form, where the form will be sent to our Gmail account

What could be improved: The testing, we will still test our system even though we managed to test all of it.

What needs to be done: We need to clean our database, remove the unnecessary accounts, test and try different approaches to see if there's a bug, also if the session is available and we try to search the landing page, it should go to the dashboard of the log in session
