PROGRESS UPDATE| SPRINT 3 | MAY 19 – 24

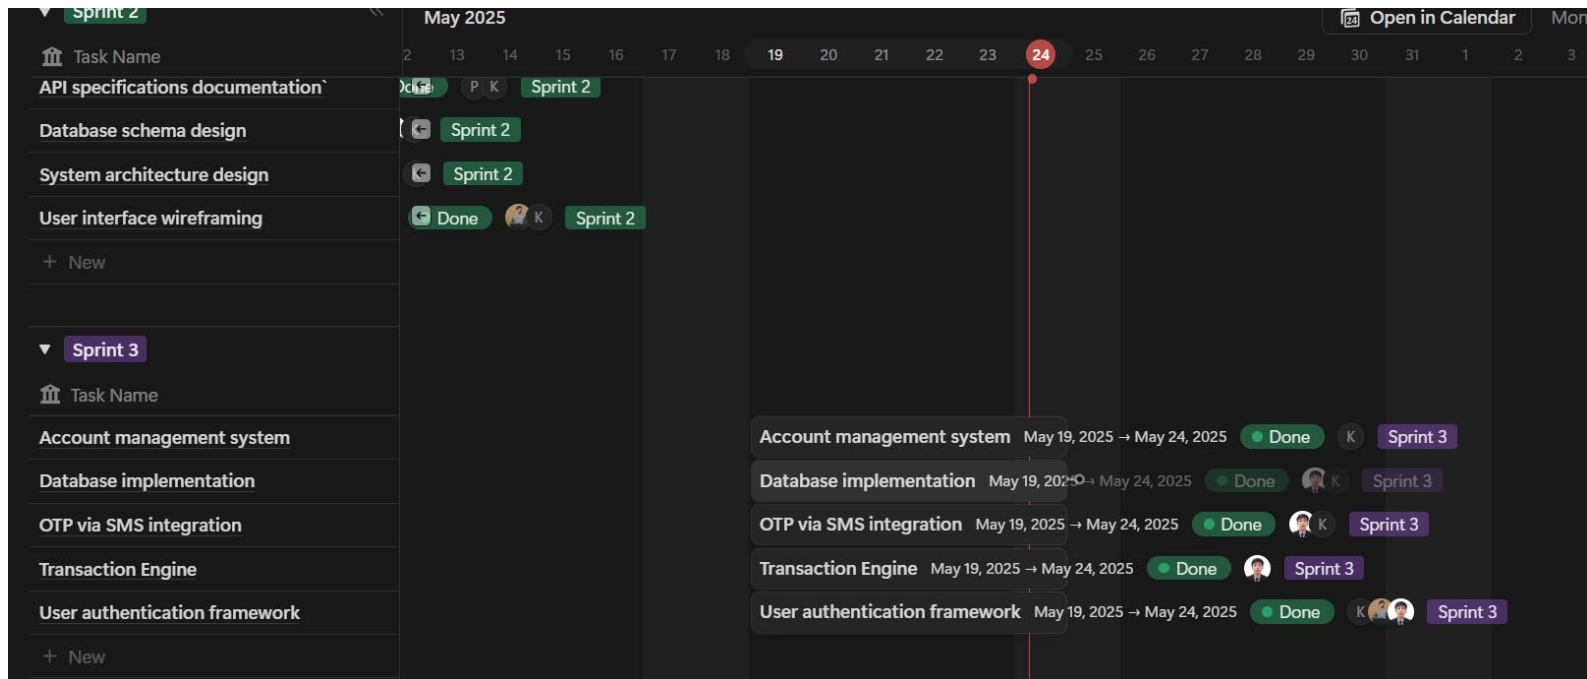

SPRINT 3 (5 / 5) * 100 = 100%

PROJECT PERCENTAGE COMPLETION (13 / 31) * 100 = 41.93 %

SPRINT 3

This sprint is not focused on backend development, but on outlining functional requirements and user interactions through use case modeling.

What went well: We still manage to have a collaboration even though we have so many projects in different subject.

What could be improved: Our task compliance, I manage a way on how can we go back on track. By committing a 2/3 hours every day in the project.

What needs to be done: Implement all the use cases diagram and OTP via SMS documentation, store the data in the database on the actual development which is on the sprint 4.
